Meersens will attend ChangeNOW
& present its solution for energy efficiency

Meersens specialist in environmental intelligence for smart decisions

Meersens, the specialist in environmental data (air, noise, pollen, UV, thermal comfort…) is proud to announce its participation at the **Change Now** Exhibition. Meersens is labeled *Deeptech* (BPI France) and *Greentech* (French Ministry of Ecological Transition) and will attend the international trade show, a meeting place for innovative companies seeking to promote sustainable solutions for the planet.

Meersens' team will actively participate in this event alongside **Microsoft** and will present its latest innovations and features of its Environmental Intelligence platform. The objective is to highlight their modeling solutions allowing the implementation of prevention plans to **reduce chronic diseases** up to 40%, and also to help **reduce the energy consumption** related to HVAC for smart buildings and up to 30%. This innovative approach will also contribute to reduce carbon footprint.

By using Meersens' predictive environmental data, such as outdoor temperature or humidity, it is possible to train Building Management Systems (BMS) to adapt to external conditions by taking preventives actions. Anticipating weather events helps to avoid over-consumption of energy, thus reducing the energy bill, while preserving the comfort and well-being of the building's occupants.

Thanks to its environmental modeling system, with a resolution of 50 meters by 50 meters anywhere in the world, Meersens is the right partner for the buildings.

As a company committed to the environmental cause, Meersens provides the means to act and to deploy predictive and preventive actions to limit the impact of the environment for all types of stakeholders and this decisions makers from smart cities, healthcare players, CRS leaders. Meersens contributes for healthier and more sustainable world.

About Meersens:

Meersens is the specialist of environmental data labelled #DeepTech and #GreenTech. SaaS / API platform for geo-temporal modeling of environmental issues in more than 190 countries (air quality, water quality, noise, pollen, fire…) contributing to health and well-being. Beyond environmental compliance, it provides the means to act and to deploy predictive and preventive actions through stakeholder engagement. This solution is for companies with a strong CSR policy and for smartcity actors.
